It should be noted that the results of the *sensitivity* analysis conducted on some items of the above tables were affected by the low level of market interest rates. By applying a change of -50 basis points to the current curve of market interest rates, the flows related to current accounts and loans would be the opposite sign of those forecast by the relative loan types; in such cases, these flows have been entered at zero.

It should be noted that some loans include covenant conditions, relating to the capacity of SEA to meet annual and/or half year financial commitments (net of financial resources available and receivables from the State) from operating activities. For some loans, non-compliance of the covenant terms results in, for

the following half-year period, the application of a correlated predetermined spread (in accordance with a contractually defined pricing grid).

At the present moment, SEA is not aware of any default situations related to the loans held or violations of any of the above-mentioned covenants.
